

# Timely Turf Tips

## April 2018

Where is our spring weather? As another round of snow falls, some of you may wonder when spring will finally arrive. Patience, it will come and with warmer weather the urge to start working the ground will be strong. Remember, a late spring means cold wet soil that still needs to dry out before too much traffic goes on it or it's begun to be worked.

### Spring Yard and Garden Tips

Once the snow melts, begin cleanup by picking up any sticks, litter, and pet waste that has accumulated over the winter on the lawn. Sweep any sand, rocks, and other debris off any hard surfaces to prevent it from reaching the storm sewer.

Do not rush to remove last year's plant residue. With fluctuating spring temperatures, that residue provides some frost protection and early spring gardens are too wet for any foot traffic anyway. Use the crumble test to see if the garden is ready for any work. This is done by taking a handful of dirt, shaping it into a ball, and poking the ball to see if it crumbles into smaller pieces. If it doesn't break apart, then wait to begin in order to prevent soil compaction.

You may not need to apply fertilizer in the spring. If the lawn is well-established, clippings were left on the turf, and a fall application was done, then spring fertilization may not be necessary. Consider a soil test for help in knowing the correct type and amount of product to use and when to apply it. See coupon below for savings. The following link explains how and where to collect your sample: <http://soiltest.cfans.umn.edu/how-sample-lawn-garden/>

If your yard had problems with crabgrass or other annual weeds, apply a pre-emergent herbicide when the soil temperature reaches 50 degrees. Be sure to watch your email for a notice from Steve when it is the right time to apply. Save now on your purchase with the coupon below.

Start to plant cold season crops (like lettuce, beets, carrots, peas, spinach, and radish) mid to late April depending on the weather.

Trim back any perennials that were left for winter interest or to provide food for birds before the new growth begins. Popular summer blooming shrubs, like Annabelle hydrangea and Anthony Waterer spirea, can be pruned back level with the ground because these plants bloom on new wood. The Minnesota Landscape Arboretum recommends this be done the first week in April.

Do you have a growing family with no extra time for gardening? Subscribe to a local Community Supported Agriculture (CSA) program. Hugo Feed Mill will be a pickup location for Costa Farm and Greenhouse (costafarm.com) again this year. They have share options for all family sizes. For more information on signup deadlines and pricing options, see the grower's website.

**\$1.00 off**

**50# Bag of Crabgrass Preventer**

(Limit 4)

1 coupon per customer. Expires 4/30/18
